

Remote Utilities Host.

Remote Utilities is an alternative to and has similar functionality to Team Viewer.

Remote Utilities for Windows has 2 parts, the remote PC needs to run the Host component and the Client (controlling PC) runs the Viewer. Note that the Viewer is the only Licenced component and has a 30 day trial period.

Users (even for Commercial use) can have a free licence for up to 10 endpoints.

The Host and Viewer as can be downloaded as “Run Only” and the Viewer as “Portable Viewer” for intermittent or once only use.

To download either component go to <https://www.remoteutilities.com/download/>

To run the Host download the Run Only Agent (agent.exe) and simply double click to run.

You will then get a screen similar to the below screenshot, pass the settings to the Controlling user.
